Boxxer POS

Boxxer POS - The Smart Point of Sale System for Small and Medium-sized Businesses

Fast and competent customer service at the Point of Sale (PoS), both in gastronomy and in retail, is a crucial element for success. By integrating the Boxxer POS system with your ERP system, you simplify sales and payment processes.

Boxxer POS System

The Boxxer POS system can be used as a single-user version on a computerized cash register but is also available as a complete system configuration in a cash register network. The POS system can be used in any industry as product and group management is based on its own database.

By adding licenses, the POS system can easily be expanded into a full-fledged ERP program. Boxxer has no problem assigning property obligations. For example, industry-specific properties such as allergens can be associated with a product and displayed on the label or similar.

Additionally, Boxxer enables the integration of your online ordering system with the POS system. With Boxxer POS, „click and collect“ offers can be easily implemented. In addition, customer cards, discount promotions, postal code recording, and coupon models can be easily integrated.

Product Management, Category Management, and Favorites

With the Boxxer POS system, product and category management is unlimited. User-friendly operation is emphasized, allowing individual categories (depending on the industry module) to be selected as separate buttons below the favorites. Using a quick input function (scanner supported), an article number can be entered including a quantity input. An additional import function for a larger number of articles simplifies the article creation process.

Features at a Glance

- GoBD compliant
- Single record keeping
- Cash register balancing capability
- Controlled cash deposit and withdrawal
- Favorites (also automatic)
- Functions as favorites
- Receipt overview
- Employee management
- Rights management
- DATEV Export
- Adjustable chart of accounts
- Sales reports
- Product management
- Category management
- Z-Report
- Z-Report overview
- Cash mirror control
- Interface to ESL label optional
- Free items
- Item discounts
- Print last receipt
- Cancellation of receipt
- Manager cancellation

- Returns
- Park/Retrieve Transaction
- Employee purchase
- Interface to external display
- Data backup (also external)
- Training cash register (no receipt, no printout)
- Turn receipt printing on/off
- Quick input with multiplier
- Scanner interface
- Cash drawer interface
- Split receipts
- Daily offers
- ZVT interface optional (credit cards)
- comparable stocks etc. in branch networks
- Use as a single-user version (PC) or in a cash register network (server)

System Requirements/Features

- Usable on any Windows PC (Win10, WinPOS Ready, Win IoT)
- min. 2 GB RAM, recommended 4 GB
- DotNet 4.0
- Installation of MySQL as database

Employee Management, Rights Management, Functions

The standard license allows use by up to eight users. In addition to regular cash register transactions, individual rights (e.g., cancellation rights) or extended rights (e.g., evaluations, Z-reports, cash deposits, or cash withdrawals) can be assigned using rights management.

Furthermore, the Boxxer POS system offers functions such as the schedulable creation of special offers for a defined period and the booking and payment of returns. In addition, cash register transactions can be „parked“ and retrieved for later cash register operations.

Tax Office, Accounting, and Co.

Boxxer POS meets the requirements of the tax office and is compliant with the GoBD (Principles for the proper management and storage of books, records, and documents in electronic form as well as data access). All transactions (deposits, withdrawals, cancellations) are saved. The determination of the change fund at the beginning of a shift or at the end of a Z-report by

the respective user enables cash reconciliation for the tax office. This means that the change fund plus cash receipts result in the cash balance in the cash register, which can be accessed at the push of a button and transmitted through a financial export (data access by a tax official).

Data backup can be done in various ways, but generally it is saved on a drive of the respective PC; however, external storage media can also be used.

Through an integrated DATEV interface, transactions or Z-report processes are automatically transmitted to the tax consultant. The prerequisite for this is that the account framework is activated upon initial operation.

Analysis, Z-report, cash balance

In addition to standard daily or monthly reporting, evaluations can be defined for an individual time period. With the Z-report showing the respective cash balance (cash reconciliation), the completeness of your cash register records for the tax office is ensured.

TSE interface (Technical Security Device)

Boxxer POS is equipped with a TSE interface. This so-called technical security device ensures that the transactions carried out are additionally saved on an external storage medium in a certain data format. We are happy to advise you on the selection of a suitable storage medium (depending on the hardware).

Single workstation, network, technology

Boxxer is a client/server application. This means that when installing, you can decide whether to have the database stored locally on the cash register PC (usually the case) or in network mode on a server.

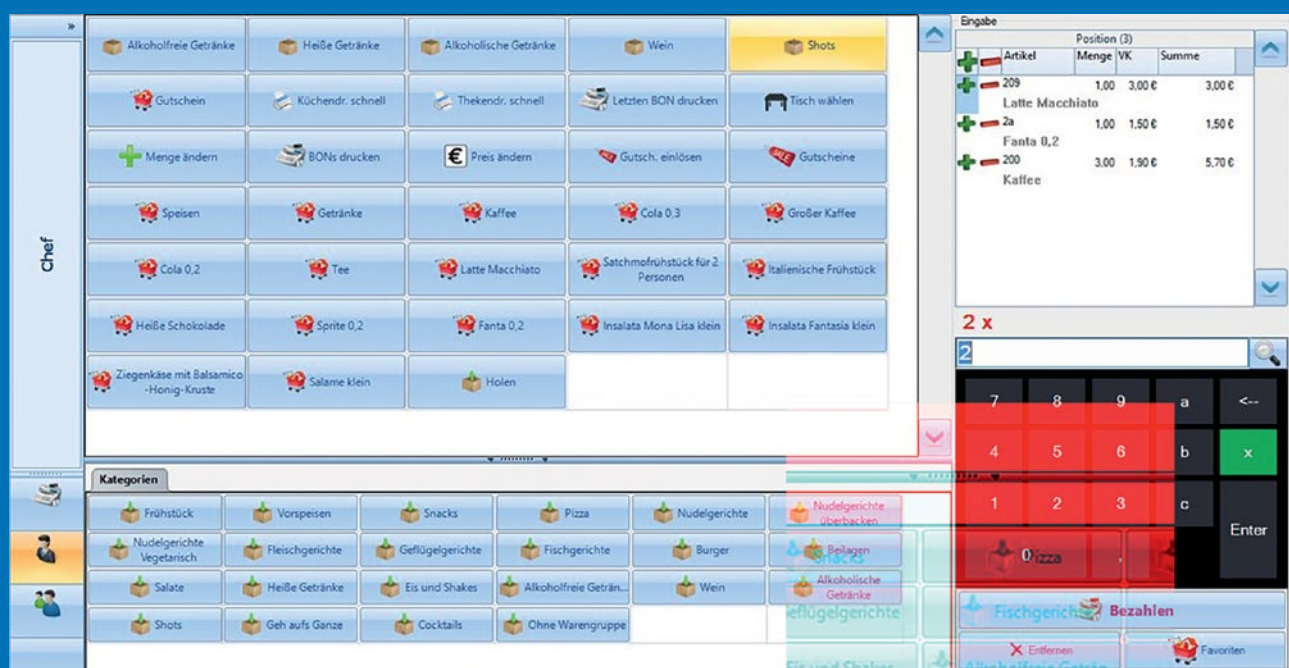

Training cash register, help and support

An integrated training cash register facilitates the

training process. After configuration is complete, a copy of the initial application is generated. To avoid confusion, the training cash register and the live cash register cannot be started simultaneously. No receipts or reports can be printed within the training cash register. The use of the training cash register is reported to the live cash register.

Contact

We would be happy to provide you with detailed information and prices for the Boxxer-POS modules. Simply contact us or send us an email at sales@medialine.ag.

The input screen or keypad of the POS cash register can be freely designed. Here is an example from the gastro-nomy industry. Depending on industry requirements, functions, products or information fields can be provided in the upper key area.

Subject to change and errors. Our general terms and conditions apply in the current version. The product description does not constitute a binding offer and is for informational purposes only. Contractual details can be found in our offers and service catalogs, which we would be happy to create for you. as of: 06/2022
